

# MOBILE-911<sup>®</sup>

Reliable. Secure. Efficient.

Mobile device usage is accelerating in the workplace. To help you leverage this technology for increased productivity, WIN-911 Software has developed Mobile-911 with support for iPhone™, Android™ and BlackBerry™ smart phones.

This powerful application enhances WIN-911® by using push notifications to alert users of new alarm events. The application on your phone retrieves new alarm details from the Mobile-911 Server utilizing limited bandwidth and secure encrypted HTTPS protocol.

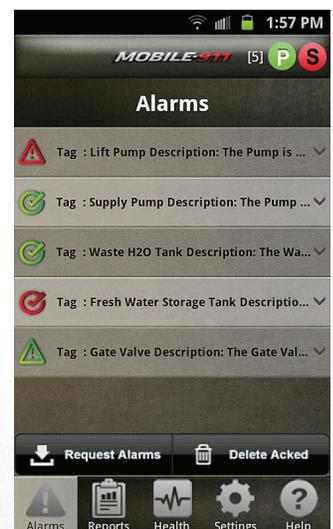

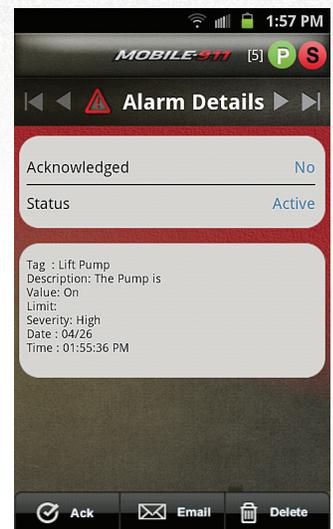

Mobile-911 is designed to allow your team to view alarms on a dedicated summary screen. It also offers you the ability to easily acknowledge alarms, view the status of any active alarm, request WIN-411® Reports from a list of pre-configured reports and monitor health of WIN-911®.

## ALARM SEQUENCE

Utilizing the phone's notification center an incoming alarm will alert the user to an incoming alarm message.

The Mobile-911 application icon or the notification alert gives you direct access to the Summary Screen enabling you to respond to alarms quickly. The Summary Screen provides a complete overview of all WIN-911 alarms.

Select an alarm from the summary screen to see the alarm details. You can acknowledge the alarm by hitting the "Ack" button or, if required, by entering your unique acknowledgment code. The acknowledged state of the alarm is instantly updated on all phones that received the alarm and includes information about who acknowledged the alarm.

Secure. Reliable. Intuitive.

## Action Menu

The Mobile-911 Alarm Request Menu gives you concise, up-to-the-minute information about WIN-911 alarms.

**All** - Displays all alarms

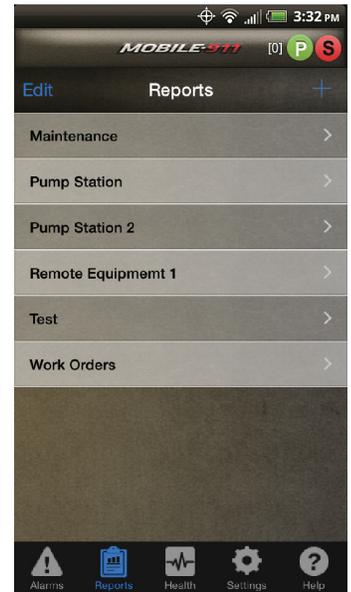

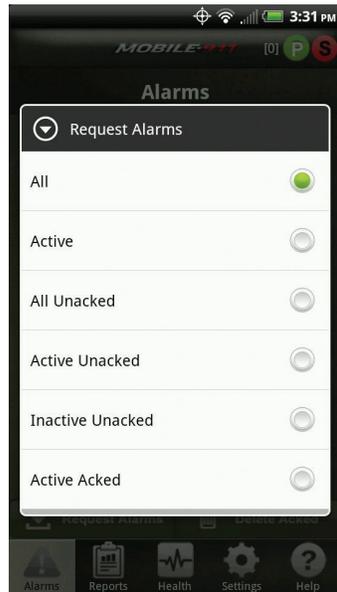

**Active** - Displays all alarms that are in the alarm state, regardless of their acked state

**All Unacked** - Displays all alarms that have not been acked

**Active Unacked** - Displays all alarms that are in the alarm condition and have not been acked

**Inactive Unacked** - Displays all alarms that have gone back to the normal condition, but have not been acked

**Active Acked** - Displays all alarms that are in the alarm condition and have been acked

## Next Generation Mobile-911 Server

Mobile-911 Server combines the power of secure messaging with the reliability of the industry's leading remote notification software to deliver the information your team needs to manage and respond to alarms, quickly and effectively.

## New Notification Sounds and Improved Viewing Experience

Mobile-911 allows users to assign unique ring tones to the Mobile-911 smartphone app enabling the recipient to quickly respond to an alarm event any time, anywhere.

## Mobile-911 Reports

Mobile-911 Reports gives you remote access to critical process information. Select one of the pre-configured reports and get the current values of tags from OPC DA servers and other supported SCADA software.
