

## WIN-911 BECOMES AN INVENSYS CERTIFIED PARTNER

Austin, Texas (March 20, 2014) – WIN-911 Software has strengthened its relationship with Invensys by becoming a Certified Product Partner. WIN-911's five models of alarm notification software provide intelligent, scalable alarm message alerts and delivery via user-defined communication channels that complement Invensys' Wonderware® human machine interface (HMI) solutions.

"Invensys customers will appreciate the documented compatibility between Wonderware products and WIN-911," said Frank Grygier, WIN-911's vice president of strategic relationships. "WIN-911 is a secure and scalable alarm notification product relied on by personnel around the globe responsible for SCADA system management. We are happy to become a Certified Invensys Product Partner."

"Invensys is pleased that WIN-911 has achieved Certified status," stated Dan Fitzpatrick, manager of business development for Invensys. "Designation as an Invensys Certified Partner indicates compatibility between our products which provides Invensys' end users a higher degree of confidence of a successful implementation with this partner product."

WIN-911's solutions send reliable notifications that can be managed via mobile devices, web browsers, SMS/text, email, and pager/phone line, allowing personnel to interact with the system remotely. WIN-911 can be configured to send and verify alarm notifications to authorized personnel, using an intelligent logic engine to escalate alerts and record responses when an alarm is triggered. Using WIN-911 in combination with Wonderware InTouch and Wonderware System Platform software provides a faster response to emerging issues, allows team members to communicate responsibility for response, secures all data and communications, and provides easy setup by browsing alarm tags directly in the InTouch and System Platform environment.

With direct data connections to leading HMI/SCADA packages as well as generic OPC and DDE connections, WIN-911 has a connection available to every alarm source. To download a demo of WIN-911's smartphone apps and learn more about the leading alarm notification software now Certified by Invensys, visit the WIN-911 website at [www.WIN911.com](http://www.WIN911.com).
